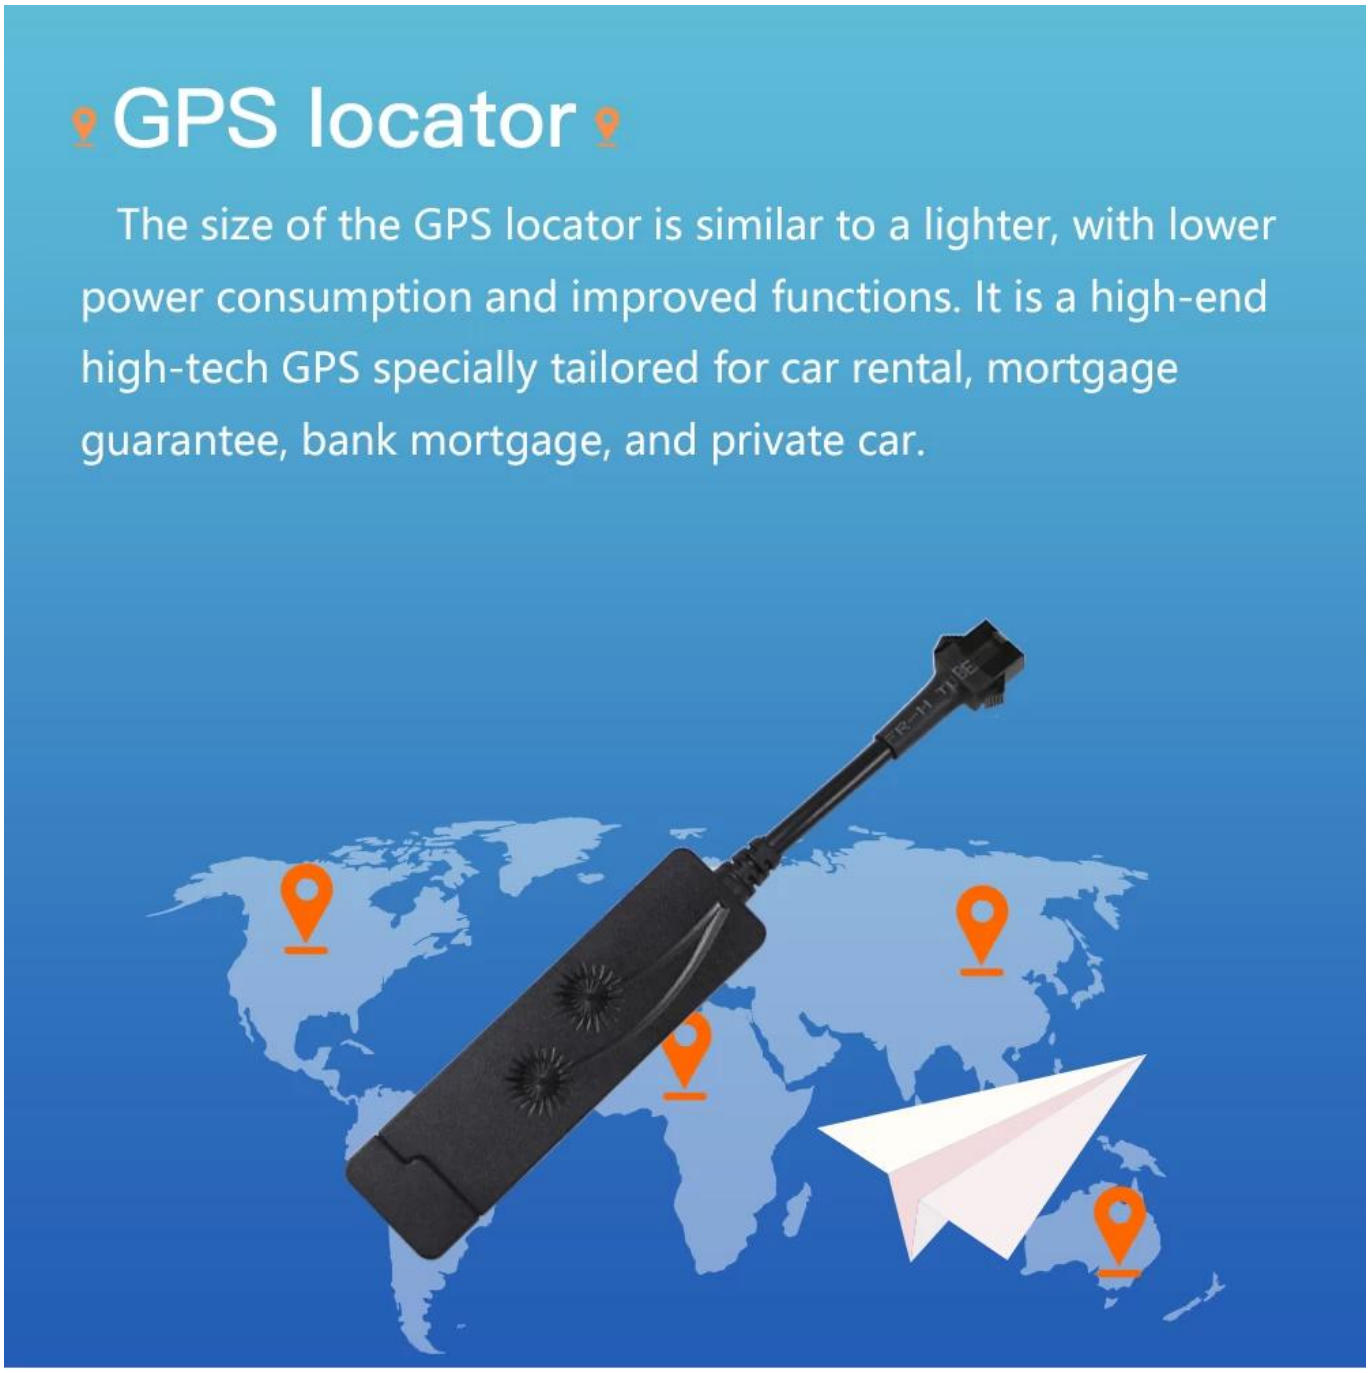
صغير في الوقت الحقيقي منبه مضاد للسرقة لتحديد المواقع GPS جهاز تعقب للسيارة



Technical Parameters

Working voltage	DC 9~90V
Operating current	Saidtationary current 10mA
Specification size	L83mm*W23mm*H12.5mm
Positioning method	GPS/LBS
Positioning error	<10m (lab data is for reference only)
Communication network	GPRS
Communication method	TCP
Complete set weight	27g
Backup battery working time)	0.5 hours

Main function

Positioning	Track	Remote shutdown	Track playback
Setting	Electric fence	Voltage detection	Vibration alarm
Power failure alarm	Displacement alarm	Phone monitoring	No need to charge
Dustproof and waterproof	Speed alarm	Remote shutdown	Low battery protection

Small size (similar as lighter), easy to install.

Widely used

KM-02 is a GPS locator specially designed for mortgage, guarantee and leasing companies. The latest upgraded version, compact host, GPS second positioning, precise positioning, installation concealment, anti-tampering, has been widely used in various industries of vehicles.

Remote power off function

The GPS locator is very powerful. It can not only locate the position of the vehicle, but also remotely control the fuel and electric function of the car. It can also vibrate the alarm and monitor the vehicle to achieve uniform management of the vehicle.

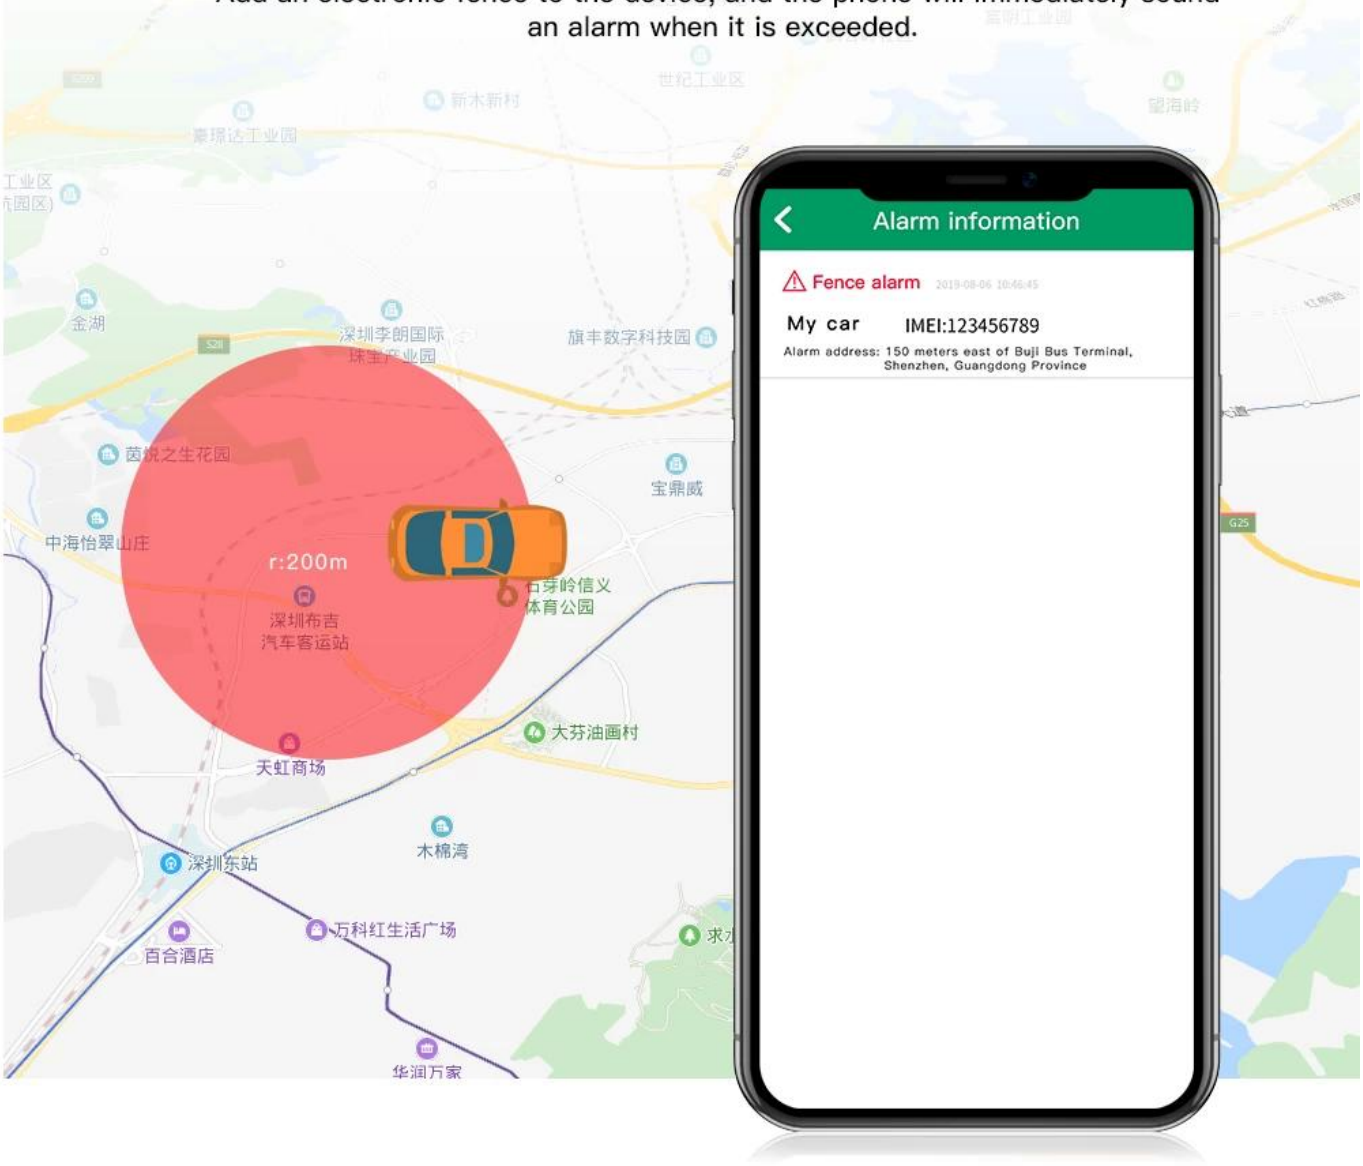
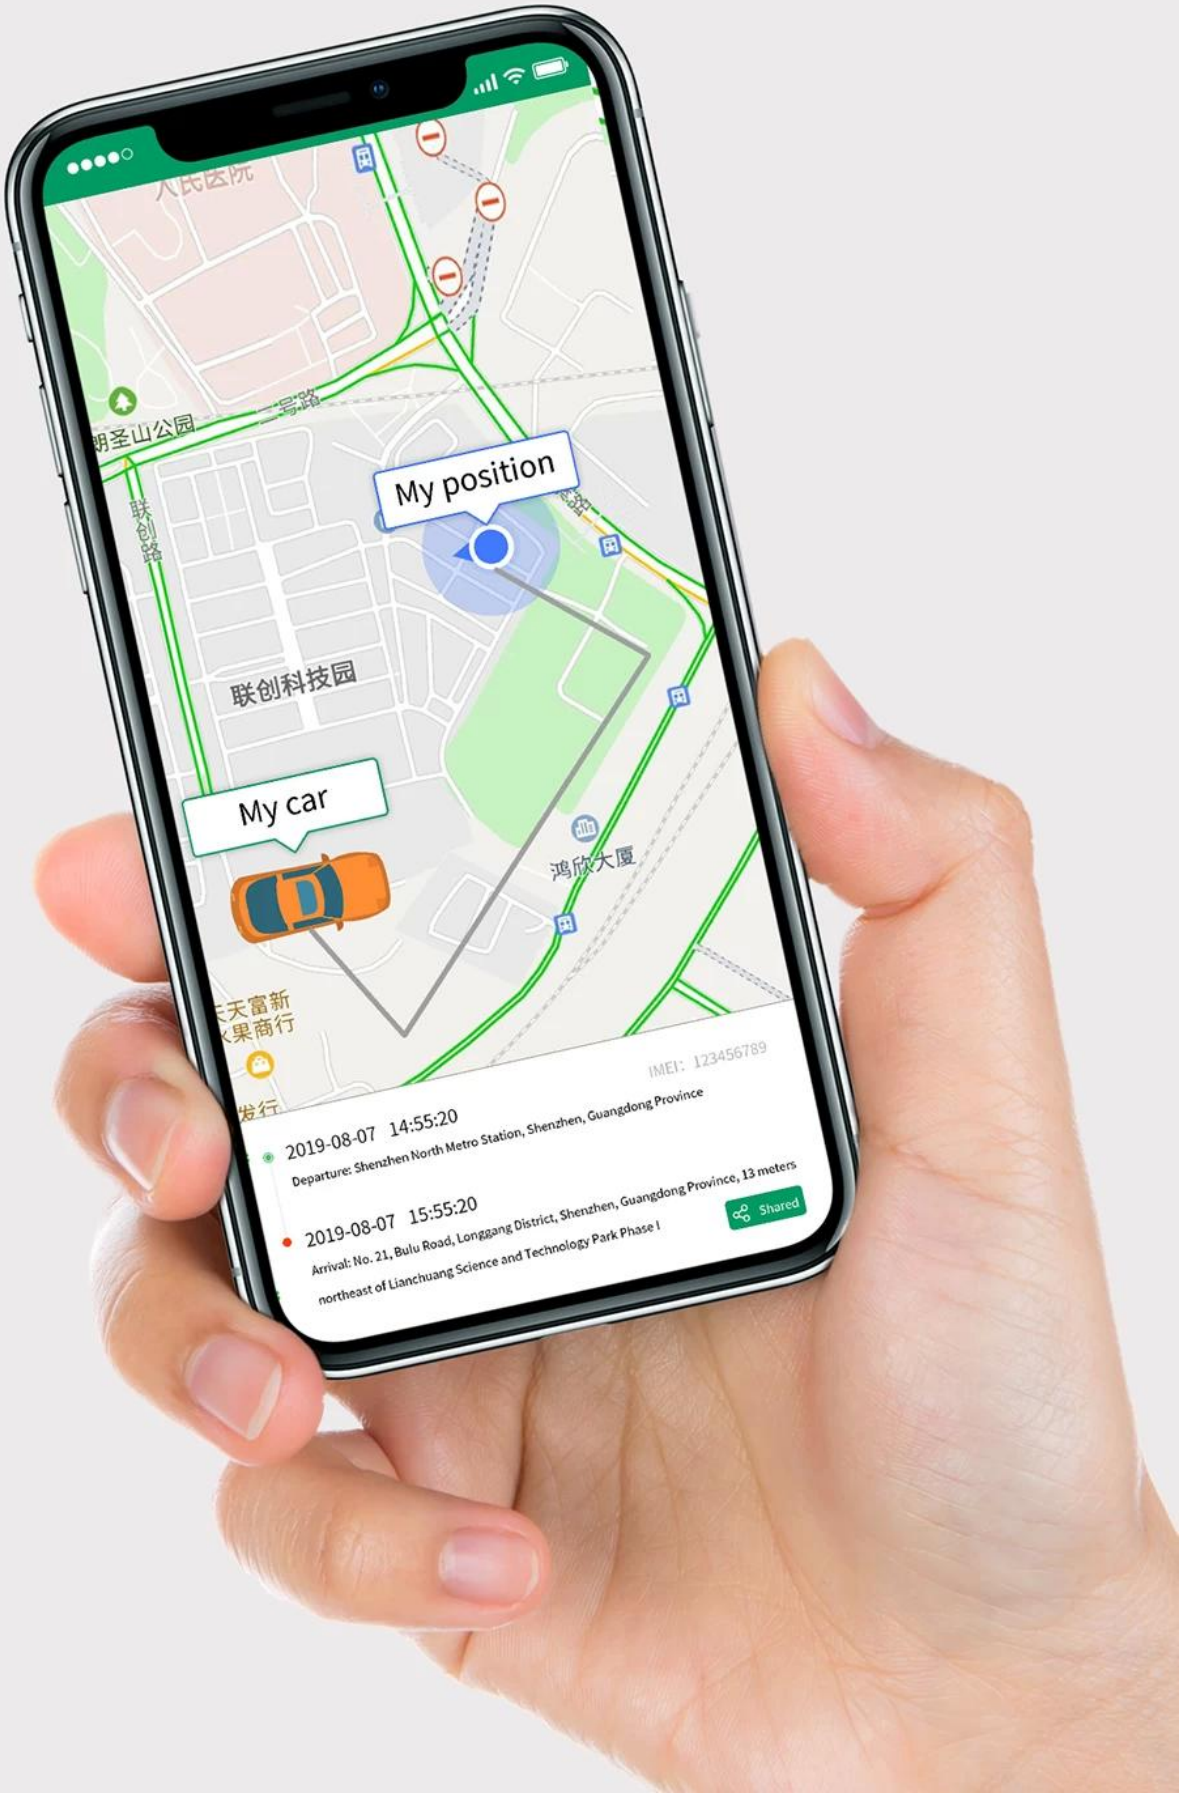
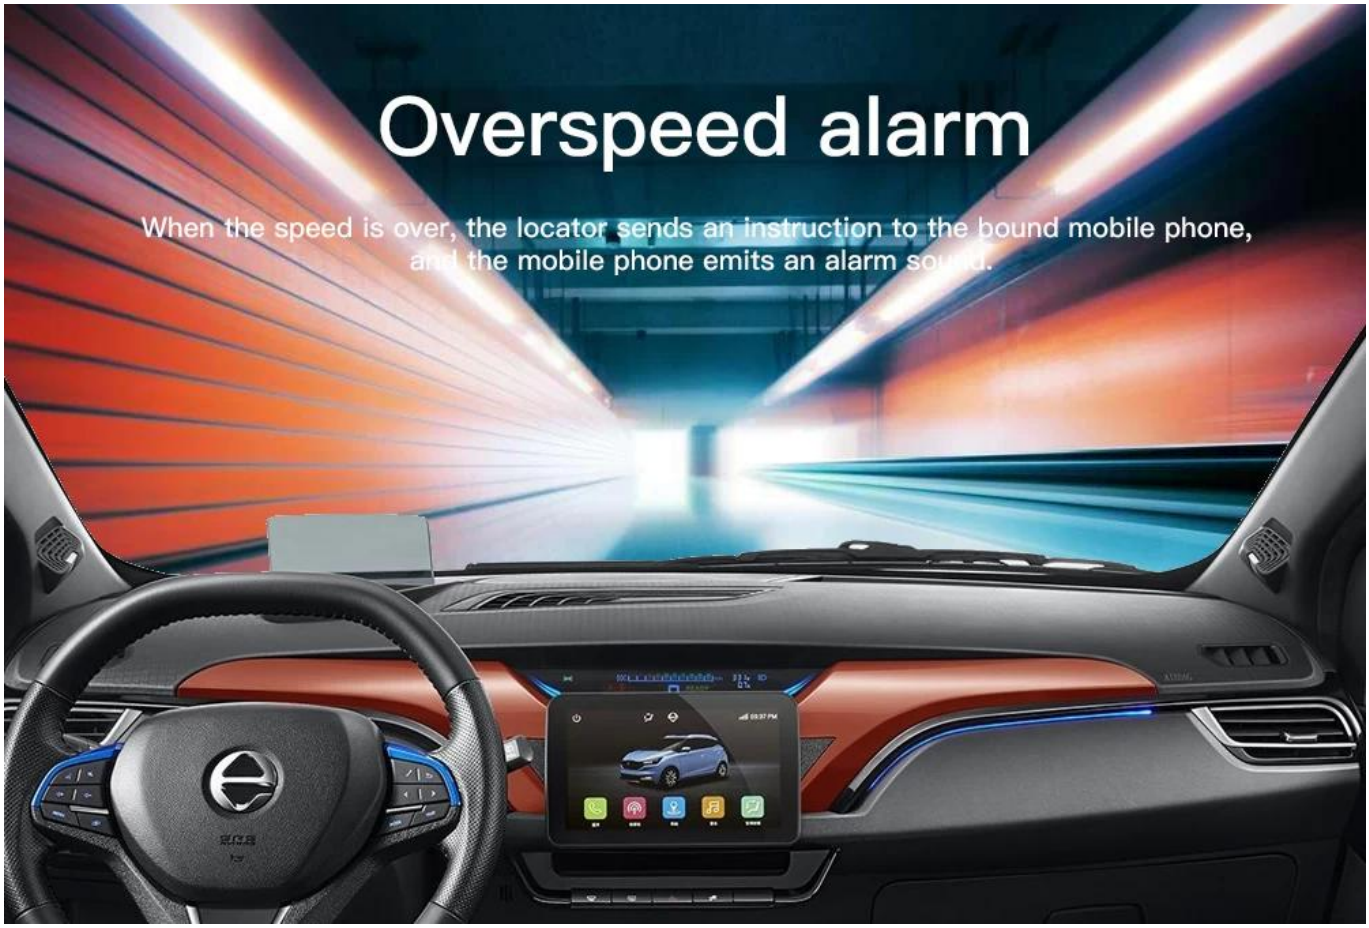
Anti-theft alarm

Add an electronic fence to the device, and the phone will immediately sound an alarm when it is exceeded.



Track playback function





Overspeed alarm
When the speed is over, the locator sends an instruction to the bound mobile phone,
and the mobile phone emits an alarm sound.
