

Omni Parking Beacon for Standard Parking When Launching Public Sharing Bikes

Working with Omni smart [sharing bike lock](#), M524DD parking beacon supports fix parking standardizedly to solve the problems of the chaos of poorly regulated parking in bicycle sharing market. Users' random parking becomes a big problem in the market.

How does parking beacon look like?

The M524DD parking beacon has built-in large-capacity lithium sub battery, long working hours, and a solid aluminum alloy shell design and IP67 waterproof level, which ensures that parking beacon works stably and reliably in harsh outdoor environment without manual inspection and maintenance.

The device also has a built-in high-precision real-time clock, and is equipped with an OME encryption algorithm, so that the broadcast content can be for real-time changes. And the device can not be maliciously copied by other personnel.
