

# Tracking Device for People with GPS Tracking Motion Detection

## The features of tracking device for people

1. The tracking device for people is equipped with a large-capacity rechargeable lithium battery for long working hours.
2. Built-in three-axis accelerometer for detecting the people's movement.
3. Built-in Wi-Fi and GPS modules for quick location determination of the wearer.
4. Built-in Bluetooth communication for direct connection with the people tracking app.
5. Built-in MicroSIM card and wireless communication module for reporting the people's real-time location and other information via the operator's wireless network.
6. IP65 waterproof rating.

## Function Description of this GPS tracker for people

### 1. Location Tracking

Supports single-location, continuous tracking, and positioning modes. The movement trajectory can be recorded, and remote instructions can be sent to obtain the current location of people. It supports GPS, GLONASS, BeiDou, Galileo, and Wi-Fi-assisted positioning.

### 2. 4G Communication

Through server commands, the location, battery level, and other information of the tracking device for people can be remotely accessed.

### 3. OTA Upgrade

The personal locator supports remote firmware upgrades via the server and Bluetooth upgrades.

### 4. Motion Detection

The location tracking can be activated or deactivated based on the movement of the owners, saving battery life.

### 5. Geofencing

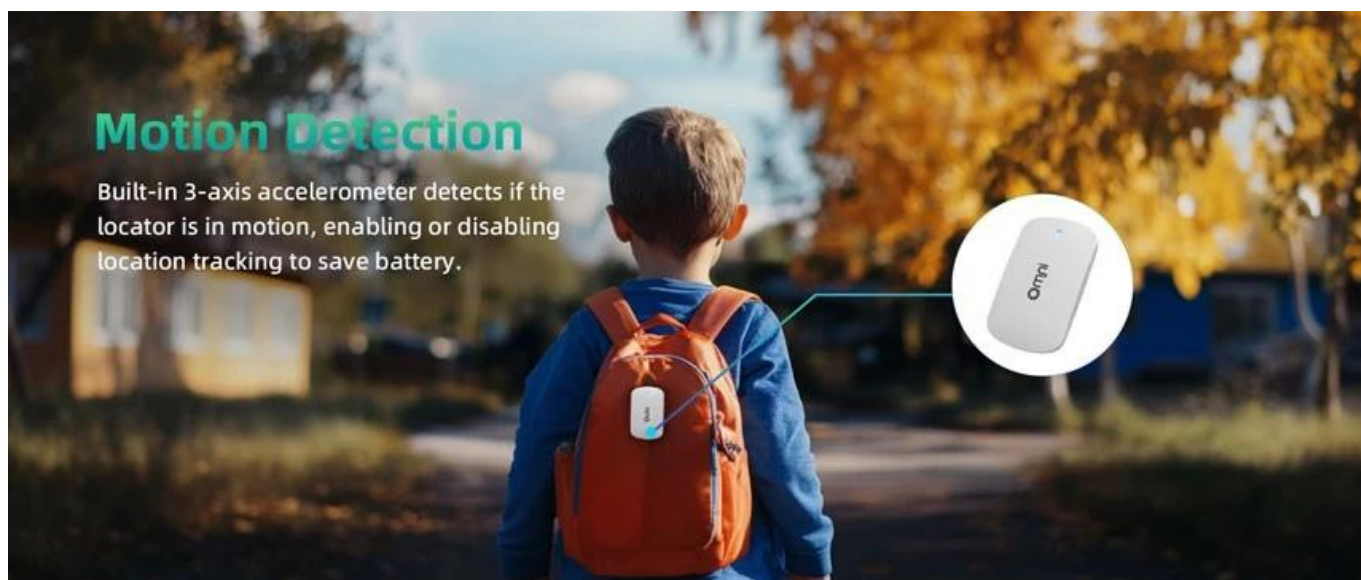

When people exceed the predefined activity area, the tracking device for people automatically sends a notification to the people tracking app via the network, triggering an out-of-area alert.

### 6. Movement History

The people tracking app allows users to view the route traveled by people who take the personal GPS tracker over a specified period.

## 7. Tracking

Real-time location of the locator wearer can be viewed via the app for quick location tracking.

## Compact and Convenient

Ideal for seniors and children, easy to wear daily.
