

Rastreamento de trajetória de posicionamento em tempo real 4G com rastreador GPS para animais de estimação com cerca geográfica

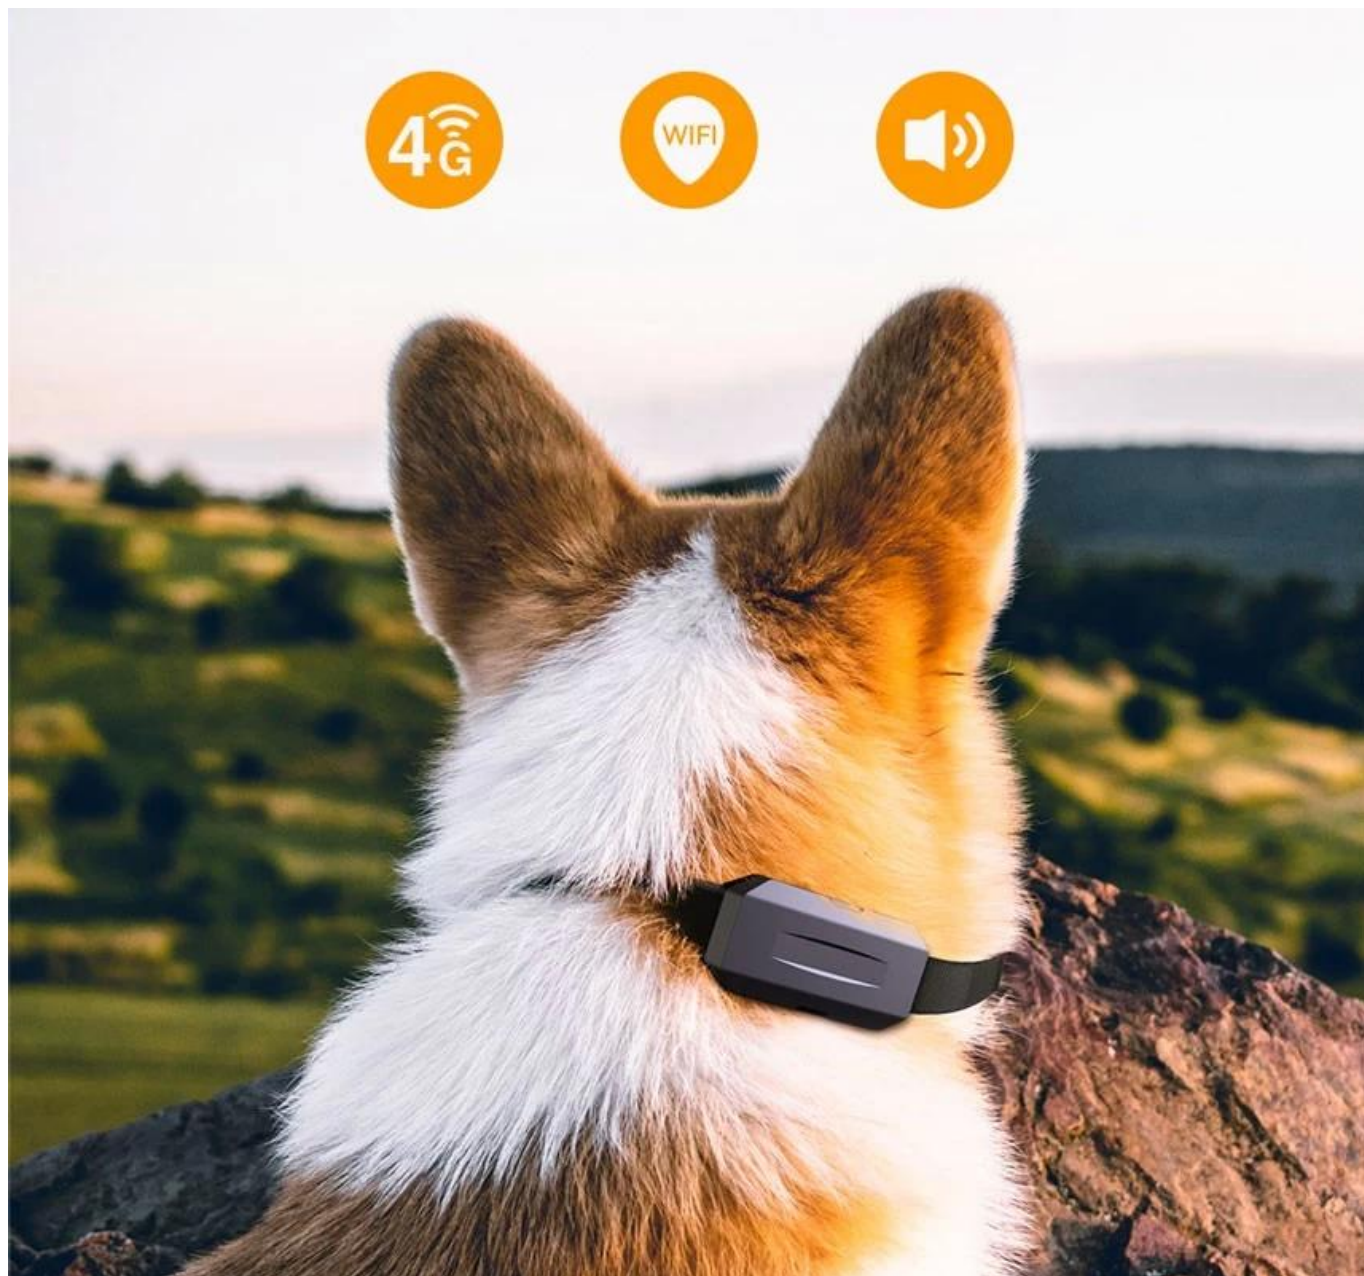

Este rastreador de animais de estimação foi projetado para rastrear e localizar animais de estimação com sistema avançado de rastreamento GPS com 4G.

As características do rastreador gps para animais de estimação

1. controle remoto de rede 4g,
2. posicionamento GPS em tempo real,
3. Comunicação Bluetooth
4. detecção de movimento e rastreamento de localização.

O rastreador GPS para animais de estimação se comunica com o servidor backend através da rede 4G e com o aplicativo móvel via Bluetooth, permitindo o monitoramento em tempo real da localização do animal.

As informações em tempo real serão enviadas para o APP de rastreamento de animais de estimação para que os donos recebam todas as notificações com facilidade.
